[REDACTED] EXAMINER

CARTER, MONICA SMITH

ART UNIT	PAPER NUMBER
3722	9

DATE MAILED: 04/29/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	09/920,207	LEE, BRIAN CRAIG <i>CR</i>
Examiner	Art Unit	
Monica S. Carter	3722	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 28 January 2003.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-19 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) The proposed drawing correction filed on _____ is: a) approved b) disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).* See the attached detailed Office action for a list of the certified copies not received.
- 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) The translation of the foreign language provisional application has been received.
- 15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413) Paper No(s). _____
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ .	6) <input type="checkbox"/> Other: _____

DETAILED ACTION

Drawings

1. The corrected or substitute drawings were received on January 2, 2003. These drawings are approved.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5, 7-9 and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. ('523) in view of Bauer et al. (6,419,987).

Ohno et al. disclose a record medium comprising a base layer (2a), at least one magnetic layer (2c) adapted to record magnetically encoded information and in contact with the base layer, at least one ink receptive layer (2d) in contact with the at least one magnetic layer, the at least one ink receptive layer adapted to absorb ink thereon (see col. 5, lines 9-14).

Ohno et al. disclose the claimed invention except for explicitly disclosing the at least one magnetic layer comprising a layer of homogenous, magnetic material. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide any desired material for the magnetic layer as deemed necessary by the end user, since it has been held to be within the general skill of a worker in the art to

Art Unit: 3722

select a known material on the basis of its suitability for the intended use as a matter of design choice. *In re Leshin*, 125 USPQ 416.

Ohno et al. disclose the claimed invention except for the at least one ink receptive layer being adapted to absorb laser or inkjet ink.

Bauer et al. disclose a method for coating a continuous web for use in making printing media wherein the web is used to make magnetic recording layers and ink-jet recording elements. When the web is used to make an ink-jet recording element, the support usually comprises an ink-receiving layer on at least one surface of the element (see col. 2, lines 57-67). Ohno et al. disclose the use of a heat-transfer system for printing the ink-receptive layer instead of laser or inkjet inks used in laser or inkjet printing. Bauer et al. show an ink-receiving layer adapted to absorb inkjet ink to produce an ink-jet recording element is an equivalent structure known in the art. Therefore, because these two types of inks used in conventional printing processes were art-recognized equivalents at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute inkjet ink on the ink-receptive layer for the ink used for the heat-transfer system.

Regarding claim 2, Ohno et al., as modified by Bauer et al., disclose the base layer supporting the magnetic printing media and allowing the magnetic printing media to be transported through the printer (see col. 5, lines 13-14).

Regarding claim 3, Ohno et al., as modified by Bauer et al., disclose the base layer being capable of being printed on since the base layer is made of plastic and it is well-known in the art that plastic has a printable surface.

Regarding claim 5, see the above rejections to claims 1 and 3.

Regarding claims 7 and 8, Ohno et al., as modified by Bauer et al. disclose the magnetically encoded information comprising text (see col. 3-11).

Regarding claim 9, see the above rejections to claim 1.

Regarding claims 17-19, Ohno et al., as modified by Bauer et al., inherently disclose the method of making the magnetically encoded printed document in the above rejections.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. in view of Bauer et al. and further in view of Fryberg et al. ('673).

Ohno et al., as modified by Bauer et al., disclose the claimed invention except for the at least one ink receptive layer comprising a surface that is coated onto the at least one ink receptive layer to increase the ink receptivity of the surface.

Fryberg et al. disclose recording sheets for ink jet printing wherein the print media is coated with cationic polymers, inorganic pigments, fillers, etc. to increase their ability to absorb ink (see col. 4, lines 34-41). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Ohno's invention to include a coating on the ink receptive layer that increases ink receptivity, as taught by Fryberg et al., to retain the printing received on the ink surface that would diminish over time without the use of the coating.

Art Unit: 3722

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. in view of Bauer et al. and further in view of Hashiba et al. ('156).

Ohno et al., as modified by Bauer et al., disclose the claimed invention except for explicitly disclosing the magnetic material being selected from the group of materials as claimed (one of which being Fe).

Hashiba et al. disclose magnetic recording medium comprising a base (2) and a magnetic recording layer (3) formed on the base. The magnetic recording material layer "may be prepared by another method of forming a metal or an alloy such as Fe, Fe-Cr, Fe-Co or Co-Cr on the base 2 by vacuum deposition, sputtering or plating." (see col. 4, lines 13-15). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Ohno's invention to provide the magnetic material selected from materials comprising a metal or alloy, as taught by Hashiba et al., since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of design choice. *In re Leshin*, 125 USPQ 416.

6. Claims 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Broscow et al. ('032) in view of Ohno et al., as used above.

Broscow et al. disclose magnetic printing media to verify the authenticity of a document comprising a base layer and a layer of magnetizable material. Broscow et al. disclose the claimed invention except for claimed invention except for the particular arrangement of the layers of the magnetic media.

Ohno et al. disclose a recording medium as set forth in the above rejections to claim 1. Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Broscow's invention to include a printing media having the above disclosed arrangement, as taught by Ohno et al., to provide a secure document that contains encoded information that can not be easily reproduced.

Brosow et al., as modified by Ohno et al., disclose the claimed invention except for explicitly disclosing the at least one magnetic layer comprising a layer of homogenous, magnetic material. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide any desired material for the magnetic layer as deemed necessary by the end user, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of design choice. *In re Leshin*, 125 USPQ 416.

7. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brosow et al. in view of Ohno et al. and further in view of Fryberg.

Brosow, as modified by Ohno et al., disclose the claimed invention except for the printable surface of the base layer comprising a surface that is coated onto the base layer to increase the ink receptivity of the surface.

Fryberg discloses disclose recording sheets for ink jet printing wherein the print media is coated with cationic polymers, inorganic pigments, fillers, etc. to increase their ability to absorb ink (see col. 4, lines 34-41). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify Brosow's

Art Unit: 3722

invention to include a coating on the base layer that increases ink receptivity, as taught by Fryberg et al., to retain the printing received on the surface that would diminish over time without the use of the coating.

Response to Arguments

8. Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

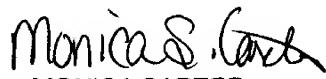

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 3722

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monica S. Carter whose telephone number is (703) 305-0305. The examiner can normally be reached on Monday-Thursday (8:00 AM - 5:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrea L. Wellington can be reached on (703) 308-2159. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9302 for regular communications and (703) 872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1148.
